The planning gap in a small business

MarketMate AI

Sales records and social metrics sit apart.
Our hypothesis: owners need a clearer route
from those records to their next campaign.

A working analytics and content prototype

Upload daily sales and social-post CSVs.
Review calculated metrics and demand estimates.
Build an evidence-led content prompt.

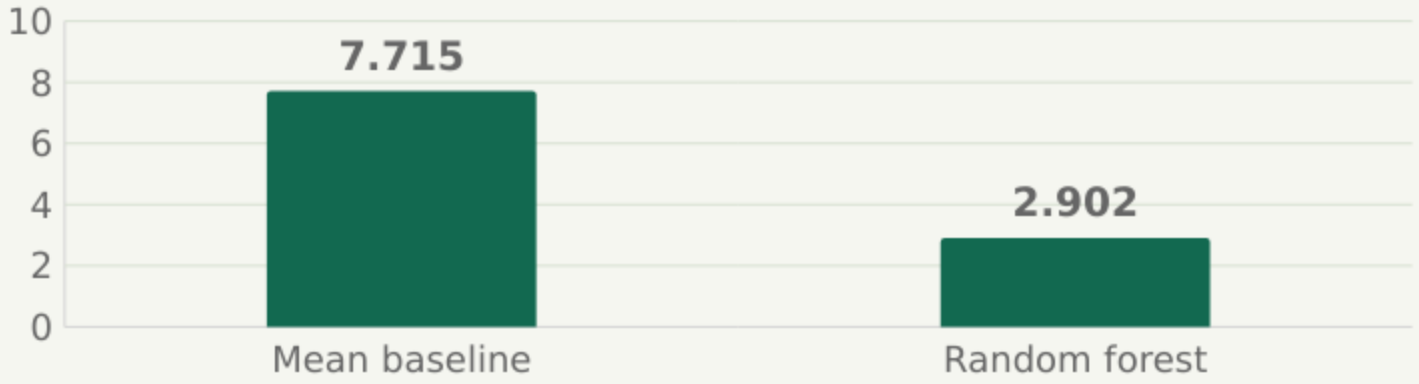

Optional local Llama drafts text.
Llama 3.2 Vision describes product photos.

120 synthetic sales days and 36 synthetic posts
Local Llama inference still requires testing on the presenter’s machine.

Initial users and demonstration evidence

Pilot audience: owners selling one main product with usable daily records and active social pages.

Model MAE on the synthetic holdout

96 training days
24 test days

Lower error is better.

Synthetic results demonstrate the method. Market size and real-business effectiveness remain unvalidated.

A business model to test

NGN 5,000

Illustrative monthly subscription per business

Variable cost assumption: NGN 1,500 per account
Contribution: NGN 3,500 per account per month
Fixed-cost assumption: NGN 35,000 per month

Contribution break-even: 10 paying businesses.
No paying customers or willingness-to-pay evidence yet.

Pilot readiness and the next evidence

Five owners. Real tasks. Recorded feedback.

Test record availability and device access.
Observe a campaign-planning task.
Score generated drafts and revise the workflow.

The ask: access to five consenting pilot users
and feedback on the workflow.
